STREET TREE INDEX

Street trees planted up to the end of the planting season, March 2001

This list includes the trees planted along the road system of Canberra. In the older suburbs all designed street trees have been listed. In many of the suburbs developed since the 1970's the use of a single species per street has been replaced by multiple species in an informal layout. Residents have often made additions too. It is not practicable to name all of the trees planted in such cases and the species that were designed for the street or appear to be more common are listed.

The streets are listed alphabetically by suburb.

This list was initially compiled from landscape development maps and field surveys, carried out prior to the 1991 edition. The list has been updated and expanded to accommodate new suburbs, amend identified errors and reflect deliberate changes to the species planted in some streets where tree replacement programs have commenced. Canberra Urban Parks and Places in conjunction with the Forestry Department at the Australian National University have compiled this list.

* Indicates the species is being phased out in this street under a formal street tree replacement program by Canberra Urban Parks and Places.
